

5 Point Fire Door Check list

If you think the property that you live or work in many have non-compliant Fire doors, follow our helpful guide and report any findings to your property manager or responsible person.
You could save a life.

What should I be looking at?	 CERTIFICATE Check that the correct certificate is present on the door. This can be found on the top of the door and with some makes on the side.	 GAPS Check the gaps Around the door Sides, top and Bottom. Gaps at top and Sides should not exceed 3mm where the bottom of the door is allowed up to 8mm. No light should be Visible under the door.	 HINGES Check hinges are firmly fixed with no missing or broken screws. There should be at least 3 hinges in place per door	 SEALS Check for the doors intumescent strips all around either the door or frame. Check to ensure there are no breaks or sign of damage	 CLOSING Check that the door closes with ease and returns FULLY to the closed position. There should be no dragging on the floor or frame.
Why check this?	Without it you Cannot verify that It is a proper Fire Door.	Smoke and Fire could travel and spread through any oversized gaps.	These hinges are needed to ensure that the door can still function in the intense heat of a fire	These seals expand in a fire scenario and help greatly with preventing Fire and smoke from getting through.	Fire doors only Work when they're Closed. Open Fire doors are completely useless
How do I check?	Use your phones Selfie Camera to Check the top of the door.	Use a £1 coin to Check the gaps as These are approx 3mm in depth.	Simply open the door and have a look at the hinges in place	Simply open the door and have a look at the sides and frame.	Open the door halfway and let go. The door should return to the closed position
